

THE COMMON
SENSE CHOICE

Innovative thinking leads to extraordinary results.

Why is TRITOflex revolutionizing the roofing and waterproofing industry around the world?

COST-SAVINGS

When compared to traditional roof replacement options, TRITOflex is saving building owners anywhere from 20-50%. Why? In many situations, no tear-off is needed and the TRITOflex rubber membrane is installed directly over the old roof, continuing to utilize the thickness of the old membrane and not waste it.

Rather than replacing the roof every 15-20 years (or less), the TRITOflex membrane can be sustained indefinitely, making it **the last roof you'll ever have to put down**. The installation is completely non-disruptive with no odor. Your business won't be interrupted or disturbed.

REMARKABLE PERFORMANCE

- Eco-friendly, “green” material. Water-based, no VOC’s, no odors.
- Instant-setting, spray applied to any thickness in just one coat.
- Monolithic, seamless, self-terminating. No fasteners, caulk, fabric, or seams.
- Resists ponding water indefinitely; not excluded from the warranty.
- FM Tested and Approved for a Class A Fire Rating, against Severe Hail, and with the highest 1-990 wind uplift rating possible.
- 1900% elongation withstands expansion and contraction and the material fully recovers.
- UV resistant, even without a top coat.
- Extreme puncture and foot traffic resistance.
- Highest adhesion in the industry to virtually any substrate.
